The Headgate 21 Longwall section (MMU 050) does not have welding leads extending from the headgate controller area to the taildrive area that are in safe operating condition. The leads at the headgate controller are not insulated properly at the female plugs. The operator is not using a return welding lead from shield 168 to the tail of the longwall. Also the operator has been cutting the insulation off of the welding leads down the face and making connections using split bolts in lieu of placing adequate connectors across the face. The operator did not have this equipment removed from service. This violation was observed during an ongoing investigation of a fatal accident that occurred on 4/5/2010.
