## General Comment

The rules on diesel equipment needs to be addressed again. The current rules doesnt provide for the health of the miner. Since the induction of diesel equipment underground the black lung in miners has increased two fold. I think that diesel smoke fumes are rough on a miners breathing. Need more studys on the effect of diesel smoke fumes vapors health effect on miners . The companys run these just like everything else until inspector shows up . I know how it works being in coal mining for over forty years
