Name: London G.
Address: United States,

General Comment

Docket No. MSHA-2014-0031

Underground Miners are already risking their lives going as far as 3.9 kilometers underground to search for the things people want and need. Without miners, we wouldn't have full access to the things we love, like: diamonds, copper, gold, zinc, etc. Because Miners are getting exposed to Diesel Exhaust they end up with severe health issues and/or dying. These Underground miners should/need to have better working conditions, or even find ways that can reduce their exposure to the Diesel Exhaust. I believe having some type of regulations on the equipment will reduce exposure significantly.
