--

Docket: MSHA-2014-0031
 Exposure of Underground Miners to Diesel Exhaust

Comment On: MSHA-2014-0031-0076
 Exposure of Underground Miners to Diesel Exhaust: Request for Information; Reopening of Rulemaking Record; Extension of Comment Period

Document: MSHA-2014-0031-0106
 Comment from h h, NA

Submitter Information

Name: h h
Organization: NA

General Comment

Climatologist/seismologist is studying glacial seismic activity in Greenland and has chastised the media and criticized a proponent of man-made climate fears for presenting a "falling-sky" view of Greenland's climate. "I also know that there is no evidence to suggest that these quakes. Scientists Claim Computer Model Predictions are 'Useless Arithmetic' - a coastal geologist and emeritus professor The coastal models are so flawed that Geologist recommends dredging up a lot of sand and dumping it on the beach "willy-nilly" and he predicts you would end up with the same result, minus the "false mathematical certitude. Nuclear physicist, a PhD-trained scientist and a former researcher for Australia's Commonwealth Scientific and Industrial Organization (CSIRO) and the Defense Science and Technology Organization (DSTO), questioned man-made climate fears in 2007. "It has been found that warming is occurring on Pluto, Mars, Jupiter and Triton," "The last time I looked, there were NO EVIL GREENHOUSE GAS belching industries on those planets, subplanets and moons," which clearly indicated that increased solar activity was a significant factor," studies of ice core data reveals that warming precedes rising CO2 levels in the atmosphere. " it would be more correct to say that temperature changes cause CO2 concentration changes," According to the findings reviewed in his paper, the variable output of the sun, the sun's gravitational relationship between the earth and the moon and earth's variable orbital relationship with the sun, regulate the earth's climate. Statistician study which found that the solar system regulates the earth's climate. The processes by which the sun affects the earth show periodicities on many time scales; each process is stochastic and immensely complex. Meteorologist dismissed what he termed "consensus

AB86-COMM-49

NONSENSE" on global warming. "But, just because major environmental groups, big media and some politicians are buying this hook, line and sinker doesn't mean as a TV weatherperson I am supposed to act as a puppy on a leash and follow along," All of this global warming alarmism is designed to GET YOUR MONEY and then GUILT YOU to how you live your life," a professor in the School of Economics ridiculed the notion of taking out an "insurance policy" against manmade global warming. manage as a matter of science, economics and logic this 'insurance policy' analogy is completely inappropriate and indeed grossly misleading. the entire 'risk management' argument simply cannot be sustained. A policy of emission reductions is like taking out an 'insurance policy' in which there is never any positive payoff, Research physicist, paper questioning carbon dioxide measurements in the atmosphere titled "Everyone is Entitled to Their Own Opinion But Not Their Own Facts." paper found that "it is NOT POSSIBLE to compare peaks and valleys in CO2 measurements from VOSTOK or EPICA with contemporary atmospheric time series. There is a mismatch in gas age resolutions. Peaks are flattened and valleys are fill of rice core measurements." The paper concluded, "Thus on our contemporary timescale it is not possible to say that CO2 level has not been above 300 ppm for the last 500,000 years. The same comment applies to comparing the 'rapid' run up of contemporary CO2 levels with the ice core records where 'sharp' pulses of less than 100 years may well be smoothed away." Aerospace engineer and a physicist ; o assume that global warming is a problem is to assume that the state of Earth's climate today is the optimal climate, the best climate that we could have or ever have had and that we need to take steps to make sure that it doesn't change," head of the International Climate Science Coalition and an engineer, disputed man-made global warming fears in 2007. "Let us start with a simple question: 'Is the world warming?' The surface temperature records used by the IPCC show that it has warmed by 0.7 deg C since 1900. The world has not warmed since 1998 and temperatures have been steady since 2002. Leyland also disputed any link between man-made CO2 and temperature. Radiosonde observations published in 2006 show NO sign of faster warming. Therefore, we can be sure that man-made carbon dioxide is NOT causing global warming," .
