Two abandoned 480 volt cables are not properly removed from service on the Headgate 21 Longwall section (MMU 050). The cables were used to connect pumps across the longwall face. They were being energized by the Distribution box just outby the Headgate Controller. The couplers were labelled as the #40 shield pump and 28 H.P. Tail Pump. The couplers were not locked out to prevent energization of the cables. The labelling of the Distribution box also contributes to an additional need to take additional precautions to remove the couplers from service. According to the electrical examination records, this distribution box has not been examined since 2/4/2010. These conditions were observed during an ongoing investigation of a fatal accident that occurred on April 5, 2010.
