Phone: 2489099338

Organization: NA

General Comment

I believe that this regulation is very smart. This allows stakeholders to think on rules and regulations on coal mines, helping the safety of the workers. By allowing more time for feedback, they will also receive more in depth comments, making them more persuasive either way. Also, by extending the deadline for comments until April 10, 2017, it gives them time to be able to analyze the past comments and think more in depth about their opinions and viewpoints. By doing this, they give themselves and all others concerned more time to state their opinions on rules and regulations, this way, the workers and all other people associated with coal mining will be more safe on the job.

AB78-COMM-32
