General Comment

Examinations of workplaces are already being carried out in mining operations and additional rule making on this standard is not needed. What is needed is MSHA to concentrate their efforts on providing mine operations education and training on-site to promote a better workplace rather than passing additional rules in order to write citations for revenue.

Why can't MSHA provide an inspector to come into a mining operation and walk through it with the operator and miners in an advisory role.....show what is below MSHA standards and provide the mine with information or knowledge on how to correct the situation instead of ambushing the operation to write citations to generate revenue? It would be called a "working partnership for safety" instead of ambush tactics.
