Docket: MSHA-2014-0031
Exposure of Underground Miners to Diesel Exhaust

Comment On: MSHA-2014-0031-0185
Requests for Information: Exposure of Underground Miners to Diesel Exhaust

Document: MSHA-2014-0031-0201
Comment from Lloyd-Pone, Isaiah

Submitter Information

Name: Isaiah Lloyd-Pone
Address: United States,

General Comment

Diesel exhaust is classified as a human carcinogen. High exposure of this will affect the health of underground miners tremendously, causing lung cancer or death. Minimizing the exposure to miners will benefit the mining industry and improve the air quality for underground miners. Please put in consideration the lives of the men and women that take on a big risk working in these unsafe environments to provide for their families.
