--

Docket: MSHA-2014-0031
Exposure of Underground Miners to Diesel Exhaust

Comment On: MSHA-2014-0031-0076
Exposure of Underground Miners to Diesel Exhaust: Request for Information; Reopening of Rulemaking Record; Extension of Comment Period

Document: MSHA-2014-0031-0101
Comment from v v, NA

Submitter Information

Name: v v
Organization: NA

General Comment

Lev Zeleny, director of the Institute of Space Research REJECTS MAN MADE CLIMATE FEARS, study the influence of all factors and receive more or less unequivocal results. In order to treat an illness, we must diagnose it first. Nobel Prize-winning Economist Gary S. Becker DEBUNKED the notion that acting now to reduce greenhouse gases will save in the long run. Naturalist Nigel Marven zoologist and botanist expressed SKEPTICISM about fears that global warming, this is just scaremongering. People are deliberately seeking out skinny bears and filming them to show they are dying out. Botanist Dr. David Bellamy, a famed UK environmental campaigner, a SKEPTIC after reviewing the science and now calls global warming fears "POPPYCOCK." Geologist Dr. Al Pekarek, We FOOL OURSELVES if we think we have a sufficiently well understood model of the climate that we can really predict, Statistician Lenny Smith dubbed climate modeling "naive realism." "Our models are being over-interpreted and misinterpreted, how do we maintain the credibility of the science? Astronomer Dr. Ian Wilson declared man-made global warming fears "bit the dust" 2007 peer-reviewed study found that even a doubling of atmospheric carbon dioxide would not have an alarming impact on global temperatures. MIT Climate Scientist Dr. Richard Lindzen fears of man-made global warming "silly". UK Astronomer Dr. David Whitehouse detailed sun's significant influence on the climate projections do not take into account the change in the sun's behaviour which most sensible predictions of man-made global warming. Professor Emeritus Peter R Odell; clearly opens to challenge the widely-held view that it is primarily the growth in carbon dioxide emissions, released by mankind's use of carbon fuels, that cause global

warming, Dr. Denis Dutton, is skeptical about the degree to which human activity has contributed to the general warming trend that began in the 1880s. I am more than a little aware of the way that adequate scientific hypotheses must always be open to falsification, Climate alarmists in particular are too prone to CHERRY PICK EVIDENCE that suits their case, IGNORING FACTORS that might disprove it," Geologist Bruno Wiskel reversed his view of manmade climate change and instead became a global warming SKEPTIC realized global warming theory was full of holes and 'red flags,' and became convinced that humans are not responsible for rising temperatures." Climatologist Jim Goodridge solar irradiance has been clearly increasing since 1940, Blames natural factors for the increase in temperatures. 2006 Petr Chylek study of Greenland by a team of scientists debunked fears of Greenland melting. We find that the current Greenland warming is not unprecedented in recent Greenland history, we find no direct evidence to support the claims that the Greenland ice sheet is melting due to increased temperature caused by increased atmospheric concentration of carbon dioxide.
