NOV 28 2016

Dear Sir / Madam,

Please find attached our review of the relationship between occupational exposure to diesel emissions and lung cancer risk in response to the call for comments on diesel exhaust exposure in underground miners (Docket No. MSHA-2014-0031). The review was accepted for publication in "Critical Reviews in Toxicology" on November 27, 2016. The review is also part of the advisory documentation for the Permanent Senate Commission for the Investigation of Health Hazards of Chemical Compounds in the Work Area (MAK Commission) and the subcommittee 'Risk Assessment' (UA III) of the Commission on Hazardous Substances (AGS), which counsels the BMAS (German Federal Ministry of Labor and Social Affairs) on work safety with regard to hazardous substances. Evaluation of the risk associated with occupational exposure to diesel motor emissions is a current issue in both committees.

Kind regards

Matthias Möhner
