## General Comment

Delaying the effective date from October 2017 to March 2018 is by all means appropriate if it results in better preparation and training of the mining community. However, what are the costs associated with this delay. The original effective date was January 2017 and now you are trying to push it back more than a year. How much will this cost? What are the main setbacks for such action? How do you guarantee there will not be yet another delay, considering there have been a few already?
