General Comment

Taking into account the potential hazards that could be faced being above or below ground involving mining and powered haulage equipment. All areas need to be included with this rule and there should not be a minimum of the number of employees that are employed to make it relevant. This rule is to make safety a top priority, by putting these perimeters in place they could potentially have the adverse effect the rule is trying to accomplish. In order to do that, the entire mining area needs to be under consideration for this rule to appropriately be administered. We do not support this rule as currently written.
