General Comment

The First thing I to say is I am a 38 year Veteran UG Coalminer all my time has been spent in the Face. I was diagnosed with Black Lung Disease 2 years ago, I am 63 years old. The Respirable dust was one too at high 2.0 % The Mines are not visited often enough by MSHA to run respirable Dust once every Quarter is not Sufficient enough.I have personally been apart of and witnessed the actions of The Company when it comes to Respirable Dust and they tell MSHA and their employees what they want to hear about this Dire problem in our Industry all that Matters to The Company is Bottom Dollar of producing enough to Make Money. Please help us find justice on the way the working man has been treated in the past and let's move on in a much more favorable way ,Thank You for your time and giving me the opportunity to voice my concerns .
