MEMORANDUM FOR PATRICIA W. SILVEY

Deputy Assistant Secretary for Operations

Mine Safety and Health Administration

THROUGH: NEAL H. MERRÍFIELD

Administrator for

Metal and Nonmetal Mine Safety and Health

FROM: THOMAS W. CHARBONEAU

Director, Office of Assessments

SUBJECT: Mine Safety and Health Administration (MSHA)

Office of Accountability Review, Metal and Nonmetal South

Central District, Rolla, Missouri Field Office and

introduction

This memorandum summarizes the Office of Accountability's review of the subject district office, field office, and mine. This review included MSHA field activities; level of enforcement; conditions and practices at the mine; Field Accompanied Reviews (FARs); Office Reviews (ORs) and MSHA supervisory and managerial oversight. The accountability review also included evaluations to determine if there were any deficiencies in areas commonly identified during Agency internal reviews of MSHA's actions following past mine disasters.

Purpose

The purpose of this accountability review is to determine whether Agency enforcement policies, procedures, and guidance are being followed consistently; whether mission critical enforcement activities are accomplished effectively; and to effectively evaluate and improve the overall performance of MSHA's enforcement program. The major outcome expected from the Office of Accountability review program is the identification of potential or actual areas for improvement and the subsequent implementation of effective corrective actions to address any identified issues.

Overview

Office of Accountability (OA) Specialists Mark Odum and Jim Poynter (Review Team) conducted this review of Metal and Nonmetal's (MNM) South Central District and the Rolla, Missouri, Field Office, from in accordance with the FY 2016 annual accountability review plan schedule. The OA selected the an underground mine and associated surface mill, because the mine is a large operation with several active work areas and was issued Section 104(d) unwarrantable failure actions during the first quarter of FY 2016.
This review focused on inspection activities at the during FY 201 (October 2015 through May 2016), with special emphasis on documentation associated with the regular E01 inspection, Event No. conducted by the Rolla - North Field Office during the first quarter of FY 2016.
As a part of this review, the OA conducted a mine visit to evaluate general mine conditions; determine whether conditions at the mine correspond with enforcement levels documented in the inspection reports reviewed; and observed work practices at the mine site.
The OA did not identify any major issues that required a corrective action plan; however, the Review Team discussed with district management some minor issues that were noted which could be resolved through implementation of inspection best practice as described in the General Inspection Procedures Handbook (GIPH). A general outline of discussion topics is included in an attachment to this memorandum.
Mine Visit
OA Specialist Mark Odum accompanied the Little Rock, Arkansas Field Office supervisor and an inspector to the companied the Little Rock, Arkansas Field Office on companied as part of a Regular Health and Safety Inspection (E01) because the Rolla, Missouri Field Office supervisor was not available for the visit.
The second is located in second in the secon
The Review Team traveled to the mill and processing areas where they observed the processing floors, ball mills, and housekeeping activities. The Team also traveled underground to the C1 working area, on the south side of the mine. There they observed loading, hauling, and dumping of the inspection of a haulage truck, ventilation in the area, an underground explosives storage facility, and a shop. The inspector conducted safety discussions with miners as they were encountered.

The Team also observed travelways, walkways, and the inspector's post inspection discussions with the operator. Two citations were issued to the mine operator during the inspection.

The district informed OA of on-going litigation with regarding regarding escapeways and refuge areas. The district had issued a citation of 30 CFR Section 57.11050a for several areas within the mine where two or more separate, properly maintained escapeways to the surface were not provided. At the time of the mine visit on the operator was using designated safe areas for affected underground locations.

Review Results

The accountability review revealed positive findings in several areas, including the following:

- For the E01 inspection reviewed, notes and documentation were organized, clear and concise, and included pictures;
- For the E01 inspection reviewed, inspectors used an equipment inventory checklist to assist them with the inspection of equipment;
- For the E01 inspection reviewed, inspectors documented observations of work practices and conducted safety talks with miners.
- The district and field office investigated hazardous condition complaints in a timely manner. Documentation clearly covered the investigative activities and subsequent results.
- The supervisor conducted regular staff meetings with inspectors and documented topics covered. The meetings provided inspectors with pertinent enforcement information and updates, and reviews of MSHA policy and procedures.
- The review did not reveal any systemic issues that required a corrective action plan.

During the review, the OA identified some minor issues that were later discussed with the district, see Attachment C.

As a part of this review, the enforcement levels for the field office and mine were compared with the district and national rates for the first quarter of FY 2016. For this period, the significant and substantial (S&S) issuance rate for the mine was 47% as compared to 33% for the field office, 29% for the district, and a 26% national rate. This higher rate was attributed to the mine having some ventilation issues and receiving several enforcement issuances for air quality and exposure levels of contaminants. The district subsequently requested a ventilation survey and evaluation by the MSHA Technical Support group. As a result of the enforcement actions by the district, the ventilation survey, and the inspector working with the operator, the mine began using additional auxiliary fans, implemented better ventilation practices, and adjusted calibration checks for air quality detectors. At the time of the mine visit, the mine was using blowing auxiliary ventilation fans and tubing to ventilate working areas. Based on

the review and observations during the mine visit, enforcement levels were appropriate for the mining conditions and work practices at the mine.
