 <u>Chart and Tables</u>	
Chart 1. - Number of fatal injuries in the U.S. mining industries, during CY 2023, CY 2024 and CY 2025 Q2.....	3
Table 1. - Number of operator injuries, injury-incidence rates, average number of employees, employee hours, and production, by type of coal mined and work location during CY 2025 Q2.....	4
Table 2. - Number of operator injuries, injury-incidence rates, average number of employees, and employee hours, by work location and mineral industry during CY 2025 Q2	5
Table 3. - Number of operator injuries, average number of employees, employee hours, and coal production, by work location, State, and mineral industry during CY 2025 Q2.....	6
Table 4. - Number of operator injuries by mineral industry, work location, and accident classification during CY 2025 Q2	17
Table 5. - Number of contractor injuries, injury-incidence rates, average number of employees, employee hours, and production, by type of coal mined and work location during CY 2025 Q2.....	19
Table 6. - Number of contractor injuries, injury-incidence rates, average number of employees, and employee hours, by work location and mineral industry during CY 2025 Q2	20
Table 7. - Number of contractor injuries, average number of employees, employee hours, and coal production, by work location, State, and mineral industry during CY 2025 Q2.....	21
Table 8. - Number of contractor injuries by mineral industry, work location, and accident classification during CY 2025 Q2	32

SCOPE OF DATA AND ITS LIMITATIONS

Enclosed in this packet are informational reports detailing the occupational injury and illness experience of mining, by category, in the United States. Data reported by operators of mining establishments concerning work injuries are summarized by work location, accident classification, part of body injured, nature of injury, and occupation. Related information on employment, worktime, and operating activity is also presented. Data reported by independent contractors performing certain work at mining locations are depicted separately in these reports.

The data are compiled from independent contractor reports and reports by operators of mines for personnel directly engaged in production, cleaning, milling, shipping, development, and maintenance and repair work, including direct supervisory and technical personnel and contract mining services. Reports are submitted as required under the Federal Mine Safety and Health Act of 1977, Public Law 91-173 as amended by Public Law 95-164. Any injuries reported for mines that do not have employee hours on file for the same time period and sub-unit are not counted or used in the computation of incidence rates. Furthermore, data collected for employment and hours worked in those activities reflect the contractor's total metallic/nonmetallic work locations and total coal work locations and not the individual mine sites.

In order to maintain consistency with prior years, fatalities attributed to independent contractor employees are included in chart 1 (see page 3). However, beginning in 1983, tabular data on independent contractors are depicted separately from operator data. Independent contractors are exempt from reporting employment and injury information relating to "low hazard" activities performed at mining operations. Mandatory information now is limited to their activities which involve:

- mine development;
- construction, reconstruction or demolition of mine facilities;
- construction of dams;
- excavation or earth moving;
- equipment installation, service or repair;
- material handling;
- drilling or blasting

Please note all current-year data presented in this publication are preliminary and subject to change.

DEFINITIONS AND NOTES

The term “injury,” as used in this publication, includes all reportable occupational injuries and those illnesses which result from a work accident or from exposure involving a single incident in the work environment. A reportable “injury” is an injury to an individual, occurring at a mining operation that requires medical treatment or results in death or loss of consciousness or inability to perform all job duties on any workday after the injury or temporary assignment to other duties or transfer to another job. The injury occurrences are classified according to severity as follows:

1. FATAL: Occurrences resulting in death.
2. NFDL: Non fatal occurrences with Days Lost (lost workdays). That is, non fatal injury occurrences that result in days away from work or days of restricted work activity.
3. NDL: Occurrences with No Days Lost. That is, non fatal injury occurrences resulting only in loss of consciousness or medical treatment other than first aid.

Incidence rates represent the number of injuries that occurred for each 200,000 employee hours worked, computed as follows:

$$IR = (Number\ of\ Injury\ Occurrences \div Number\ of\ Employee\ Hours) \times 200,000$$

In the event that the computation of an incidence rate results in a number less than 0.005, then an asterisk (*) will be shown instead of a number in the tabular location; if the incidence rate is 999.99 or more, then the rate will be shown as 999.99.

“Average number of workers” is a summary of the average number of persons working at individual mining establishments during periods (not necessarily continuous) of active operations.

“Production reported” is the short tons of clean coal reported to MSHA as being produced at active coal mines. This number is self-reported by coal operators.

Chart 1. Number of Fatal Injuries in the U.S. Mining Industries

Calendar Year 2023, 2024 and 2025 Q2 | See page 1 for details.
