Crane Safety – Manual/Operating
• Know your load chart and weight to be lifted so you can avoid tipping.
• Use Operator’s Manual as a guide for correct inspection procedures.
• Refer to operating policies/procedures for proper hand signals.
• Crane must be level when making lift.
• Never attempt to swing load before lofting. “Side Loading” the boom could cause collapse.

Crane Safety - Operation
• Survey work area for pad conditions, overhead power lines, pipelines, etc.
• When operating a crane in close proximity of overhead power lines, NEVER permit people to be in location where they can contact the crane or load.
• Rigging must be kept in good condition; rigging is only as strong as its weakest component.
• Make sure crane operator and signalman communicate with proper crane hand signals.
• Avoid overloading and sudden jerks.
• Awkward loads should have Tag Lines to control loads when lifting.
• Hook latch must be in good working condition.
• Use the operator’s manual as a guide for correct inspection procedures.
• A competent person must inspect all rigging before each use.
• Personal working tag lines should review area for slipping, tripping, and falling hazards. 56.16007
• Never work under suspended loads. 56.16009
