1) **Falls From Equipment**
   - Falls are one of the most frequent causes of injury for operators, oilers, and mechanics.
   - Oil, grease, mud, tools and parts should be removed from the walkways of equipment.
   - Keep oil, grease and mud from the soles of your shoes.
   - Use three points of contact when climbing up and down ladders.
   - Don’t carry tools or supplies up or down ladders – hoist them.

2) **Circle of Life**
   - Check completely around equipment before moving it.
   - The size of your equipment creates a greater risk while backing-up.
   - Check your backup alarm every day.

3) **Safety Harness**
   - Use when entering bins, hoppers, tanks, etc., after power has been lockout/tagout.
   - Inspect the harness frequently for wear and tear.
   - Always have another person attending your lifeline when entering bins, hoppers, and tanks.

Attendees:
