Mine Rescue Problem Designer Command Center/Visio Guidance

- Microsoft Visio 2010 or 2013 is required for creation of all problems. Problems should always be saved as a .vss file
  - .vss is the file extension used in 2010, .vssx was introduced in 2013
  - .vssx should not be used, as some teams are using 2010, and may not be able to open the file
- Use current mine rescue stencil set (.vsd) provided on MSHA's website
- Drawing scale of problem must be set to 1:10 to use current stencil set
  - Accessed from Page Setup window (shown below):
